(54) Title: METHOD OF DYNAMIC TRANSPORTING OF OBJECT WITH FLOW OF CARRYING MEDIUM

(57) Abstract: In a method of the energy-saving dynamic transporting of object with a flow of a carrying medium, action are applied to the carrying medium which are created in an action element during a- process of conversion of an energy supplied to it, so that the flow of a carrying medium created thereby acts on the object for performing a process of its transporting in a given direction, and a modulation of a value of the action is performed in the. action element sq. that the, flow of the carrying medium which is .dynamically created moves with a given dynamic periodically changing sign- alternating acceleration during the process of transporting of the object.
